

Proposed Solution

One-Scan Verdicts

Every photograph is a legal audit, not a complaint form.

Self-Binding Evidence

Dossiers seal themselves: OCR, values, citation, hash.

Officer-Grade Output

Console drafts notices, not more paperwork.

Innovation

1. Zero-Hardware Scanning

any smartphone becomes an inspector-grade tool.

2. Crowd-Powered Triage

high-signal cases rise before a file is ever opened.

3. Receipt-Style Orders

printed notices read like true statutory documents.

4. Free-Tier Native

open rule engine on serverless plans; funds go to scale, not licences.

Uniqueness

Clause-Exact Verdicts

Hash-Sealed Dossiers

Public Outcome Feed

Why Us

Robust Architecture: one rule engine, one dossier, one ledger — no stitched tools.

Trust by Design: hashes and public statuses make every case independently auditable.

Statutory Engine: LMPC 2011 encoded as code; rules update in minutes, not gazette-years.

Impact-First: faster closures, cleaner markets, zero added infrastructure.

EVIDENCE CHAIN Label image → OCR snippet → measured vs required → citation → signature hash
